GLOBALY PATENTED
SYSTEMS

CONSTANKITCHEN

We are a company dedicated to the aluminum sector, specializing in the manufacture of our own innovative products.

We have created several worldwide patents and dies for our furniture systems.

We want to bring the most advanced and cutting-edge products to every home through our aluminum module system. A combination of durability, elegance, and quality that adapts to any space, with properties that no other product can offer.

ALUMINUM FURNITURE

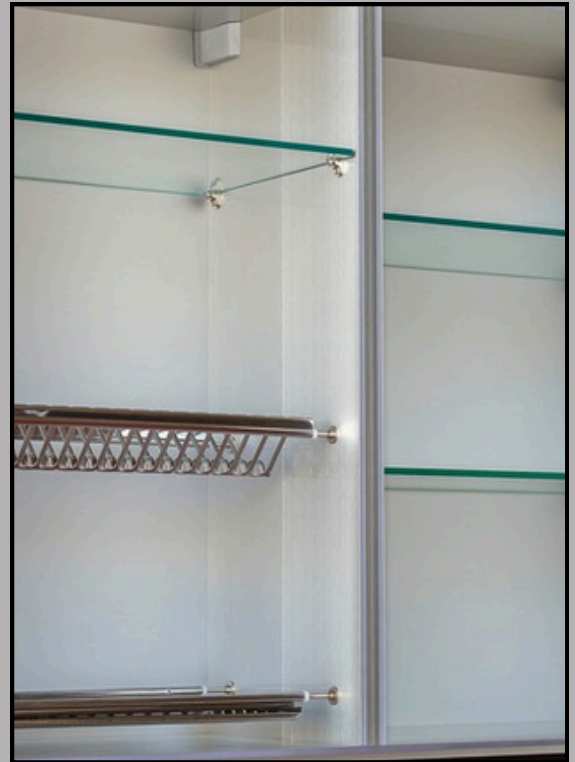

The aluminum furniture has been designed to withstand extreme conditions, both outdoors and indoors.

It adapts well to any weather conditions.

This is a product with cutting-edge designs, made entirely of aluminum. It is unique and exclusive, with many advantages and applications in everyday life.

Kitchen wall furniture.

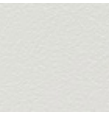

Kitchen wall furniture. (DrainBoard).

Kitchen furniture sink (Gola profile).

STANDARD FINISHES

		
Textured Anthracite	Textured Black	Textured White
		
	Anodized Silver	

Other lacquered finishes are available, allowing your imagination to run wild.

ADVANTAGES OF OUR PRODUCTS

Its manufacture using independent profiles gives the product versatility and advantages such as the following:

- Its construction makes it resistant to heavy loads.
- Resistant to water, condensation, and humidity.
- Does not rust, ideal for kitchens with poor ventilation and outdoor areas.
- Hygienic, slows the spread of bacteria and viruses.
- Anodizing allows the use of cleaning products, including solvents.
- Easy to clean and suitable for domestic, sanitary, and hospitality use.
- Withstands high temperatures, making it a non-combustible material, which means it does not burn or contribute to the spread of fire.
- Easy to install without the need for special tools, making it a product that can be easily adapted to any size and location.
- Adaptable to modern kitchen designs, as it can be lacquered in any finish, giving a personal touch to each kitchen.
- Suitable for any interior accessory system, without the need for special machining.

TECHNICAL DESCRIPTION

Our system consists of extruded aluminum profiles that are sectioned, machined, and clipped together using a patented system.

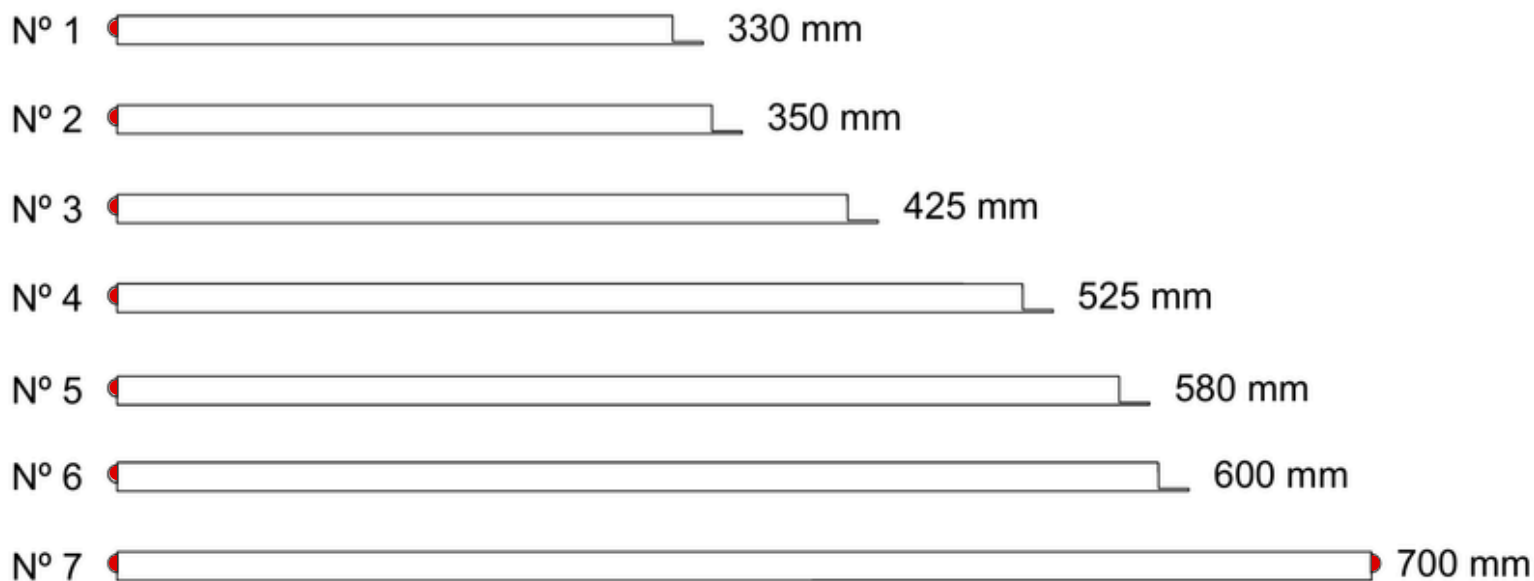

This allows for different sizes to be achieved to suit every need, creating a uniform structure that is resistant to weight.

The sliding clip-on connection between the profiles creates a solid structure, ensuring the integrity and strength of the frame.

The profiles are easy to dismantle for replacement in case of damage or to increase or decrease the number of profiles to modify the depth measurement.

Furniture system	Manufactured using the patented CONSTANKITCHEN system, it consists of cutting, machining, and assembling a set of extruded aluminum profiles. Silver anodized or lacquered, 16 mm thick. Back made of 3 mm aluminum panel with insulation.
Drawer liner	Manufactured using the same extruded profile system.
Aluminum shelf	Manufactured using the same system of extruded profiles with metal supports.
Glass shelf	Glass shelf made of 8 mm thick glass with polished edges and metal supports.

STANDARD SIZES (BACKGROUNDS) (RATE)

The inside measurement of the lower frame (standard) is the total measurement minus 17 mm at the base.

The inside measurement of the frame (sink) is the total measurement minus 70 mm at the base.
70 mm of free space for installations.

ADAPTABLE MEASURES (BACKGROUND)

N° 8		180 mm
N° 9		230 mm
N° 10		250 mm
N° 11		300 mm
N° 12		400 mm
N° 13		480 mm
N° 14		500 mm
N° 15		650 mm
N° 16		675 mm
N° 17		700 mm

The inside measurement of the lower frame (standard) is the total measurement minus 17 mm at the base.

The inside measurement of the frame (sink) is the total measurement minus 70 mm at the base. 70 mm of free space for installations.
